

# Brand Guidelines

Vela turns an Instagram profile into a real online shop. This document defines how the brand looks, moves and speaks.

# A sail, not a robot

*Vela* means *sail*. The brand promises effortless forward motion: a seller posts on Instagram, and the shop takes shape by itself — products, payments, orders.

## Idea

Instagram brings the customers; Vela does everything Instagram doesn't — checkout, card payments in Lek, inventory, orders. The wind is already there; Vela is the sail that catches it.

## Tagline

| ALBANIAN (PRIMARY)               | ENGLISH                                  |
|----------------------------------|------------------------------------------|
| Kthe Instagramin në dyqan online | Turn your Instagram into an online store |

## Brand principles

| PRINCIPLE                 | WHAT IT MEANS IN PRACTICE                                                                                                                               |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effortless</b>         | Everything happens "vetë" (by itself). Copy leads with the outcome, not the technology. The word "AI" is never used — say <b>sistemi / the system</b> . |
| <b>Warm energy</b>        | The palette is warm magenta with red and amber — commerce, sun, momentum — never corporate blue.                                                        |
| <b>Instagram-native</b>   | The brand visibly descends from the Instagram gradient. Sellers should feel Vela is the natural next step for their profile.                            |
| <b>Albanian-first</b>     | Albanian is the default language everywhere; English is the secondary locale. Prices in Lek (ALL).                                                      |
| <b>Alive, never noisy</b> | Gradients drift, counters count, cards lift — always subtle, and always disabled for reduced-motion users.                                              |

# The ship mark

A paper-boat ship drawn in the heritage Instagram gradient. It sails right — forward, to the customer.

Primary lockup — dark on light

Primary lockup — white on dark / gradient

Vertical lockup

Icon — full colour

Icon — monochrome

App icon (22% corner radius)

## Rules

- **Clear space:** keep at least the height of the ship's hull free on all sides.
- **Minimum size:** lockup 24 px tall on screen / 8 mm in print; icon alone 16 px / 5 mm.
- **Colour:** use the full-colour gradient mark on light backgrounds; the white mark on dark or gradient backgrounds. Monochrome black only where colour is unavailable.
- **Don't** recolour, rotate, outline, add shadows, stretch, or set the wordmark in another typeface.
- **Don't** place the full-colour mark on the brand gradient — use the white version.

# Warm magenta, violet-cast neutrals

One strong brand colour, neutrals with a violet undertone, and a fixed set of status colours. Tokens are defined in HSL in `globals.css`; hex values are approximations for external use.

## Core

|                                                                                                                                                                               |                                                                                                                                                                                      |                                                                                                                                                                                   |                                                                                                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|

# The signature gradient

Vela's most recognisable asset: four radial colour blobs drifting over a deep-pink base. In product it is alive (13 s organic drift); in static media use the composition below.

CSS utility `.brand-gradient` — also available clipped to text (`.brand-text`) and as an animated border (`.grad-border: 120° pan through #D946EF → #EF4444 → #F59E0B → #DB2777`).

## Where it may appear

- Hero headlines (gradient text), the primary CTA (BrandButton), splash screen, scroll-progress bar, featured pricing border, upgrade prompts.
- **Don't** use it for body text, icons, large background areas behind reading content, or more than one hero element per screen.

## Heritage gradient (Instagram)

The classic Instagram spectrum survives in the logo mark, the splash screen, story-film props and confetti — it links Vela to where its sellers come from. Never use it for UI controls.

# Clash Display + Satoshi + Inter

One display voice, two body voices: Satoshi for marketing, Inter for the product.

CLASH DISPLAY · headings & display · weights 500–700 · tracking –0.02em

## Kthe Instagramin në dyqan online

ABCDEFGHIJKLMNOPQRSTUVWXYZ

abcdefghijklmnopqrstuvwxyz 0123456789 ëç

SATOSHI · landing & auth body · 400 / 500 / 700

Sistemi i kthen postimet e tua në dyqan të vërtetë. Pa kod. Ti menaxhon gjithçka nga një panel.

Loaded from Fontshare with Inter as fallback.

INTER · product UI body · 400–700

Porositë kalojnë nëpër statuse: Në pritje  
→ Konfirmuar → Dërguar → Dorëzuar.

Feature settings "cv11", "ss01"; tabular numerals on data surfaces.

## Hierarchy & rules

| ROLE              | SPEC                                                                                  |
|-------------------|---------------------------------------------------------------------------------------|
| Display / H1–H2   | Clash Display 600, tracking –0.02em, text-wrap: balance                               |
| H3–H4             | Satoshi 700 (landing) / Clash Display 500 (app)                                       |
| Body              | Satoshi or Inter 400, line-height ≈1.55, text-wrap: pretty                            |
| Labels / eyebrows | 700, 8–9pt, letter-spacing 0.12–0.22em, uppercase                                     |
| Numbers           | tabular-nums for prices, counters and tables; prices formatted in Lek: <b>3.500 L</b> |

- Sentence case everywhere — no Title Case in Albanian copy.
- **Don't** use Clash Display below ~14 px, or for paragraphs.

# Soft, elevated, alive

## Corner radius

Base token --radius: 1.5rem. Generous rounding is a brand signature — when unsure, round more.

## Elevation

Shadows are soft, layered and faintly **violet-tinted** (base rgba(46, 33, 64, ...)) so elevation reads as glass, not grey drop-shadow. An optional glassmorphism mode renders surfaces at card/70 + 20px backdrop blur.

## Motion

| ELEMENT            | BEHAVIOUR                                                                                                                        |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Brand gradient     | brand-blob: 13 s ease-in-out, infinite alternate — four blobs drift on independent paths; movement feels organic, never looping. |
| Gradient borders   | brand-pan: 9 s ease-in-out background pan.                                                                                       |
| Entrances / scroll | GSAP: short y-offsets (20–30 px), 0.7–0.8 s, power3.out, small staggers.                                                         |
| Hover              | Cards lift via shadow + ≤2 px translate, 0.22–0.35 s ease.                                                                       |
| Accessibility      | <b>Every</b> animation is disabled under prefers-reduced-motion — no exceptions.                                                 |

# Direct, warm, jargon-free

Vela speaks like a helpful peer, not a tech vendor. Albanian first, English second.  
Short sentences. Outcomes, not features.

## Vocabulary — enforced app-wide

| NEVER SAY                     | ALBANIAN            | ENGLISH            |
|-------------------------------|---------------------|--------------------|
| AI / Artificial Intelligence  | <b>sistemi</b>      | <b>the system</b>  |
| DM / DMs                      | <b>mesazhe</b>      | <b>messages</b>    |
| Feed                          | <b>postimet</b>     | <b>posts</b>       |
| eCommerce platform / solution | <b>dyqan online</b> | <b>online shop</b> |

## Tone examples

| EXAMPLE      |                                                                                            |
|--------------|--------------------------------------------------------------------------------------------|
| <b>Do</b>    | "Sistemi i kthen postimet e tua në dyqan të vërtetë. Pa kod."                              |
| <b>Do</b>    | "Klientët blejnë vetë — pa mesazhe."                                                       |
| <b>Do</b>    | "Provo falas 7 ditë · pa kartë · anulo kurdo"                                              |
| <b>Don't</b> | "AI-powered eCommerce solution leveraging machine learning."                               |
| <b>Don't</b> | Exclamation marks in error states, or blame: errors say what happened and what to do next. |

## Mechanics

- Currency: always Lek — formatted **3.500 L** in UI, **ALL** in formal/pricing contexts.
- Both locales ship together; never leave a string untranslated.
- Emoji are allowed in marketing mock-ups and celebratory moments (🎉 on order success), never in system or error copy.
- Speak to one person ("ti" form in Albanian): "dyqani yt", "postimet e tua".

# Component rules

| ELEMENT           | RULE                                                                                                                                                  |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Component library | shadcn/ui on Radix primitives — never modified directly; brand styling wraps them.                                                                    |
| Primary CTA       | BrandButton: animated brand-gradient fill, white text. Reserved for hero and upgrade moments — one per screen. Everyday actions use the flat primary. |
| Icons             | lucide-react only, 1.5–2 px stroke. Sparkles ✦ marks the system's automatic work.                                                                     |
| Status chips      | Tinted background (colour /10) + dark status colour text — AA contrast in both themes.                                                                |
| Feedback          | Sonner toasts; success is quiet, order success gets heritage-gradient confetti.                                                                       |
| Empty states      | Icon + one-line explanation + one clear action. Never a bare "no data".                                                                               |
| Storefronts       | Merchant storefronts are themeable by sellers (Storefront Studio); the admin app itself is always the fixed Vela theme.                               |

**Vela**
